

# Our Fine Approach to Beam Selection

**Team Name**

**Participant Names**

Report describing techniques and strategies to generate and evaluate your ML model, computational cost (in hours, approximately) of training and testing, and used infrastructure. Information about the model and its training, for instance, the adopted topology of a deep net, optimizer, etc. If adopted, high-level description of a customized frontend and its features. Interesting lessons, pitfalls, results from ML models that did not work, and things the team consider relevant.
